

FootprintID® works with Brokers and their clients by providing a low cost value-add to the employee's or member's benefits, while differentiating the broker from the competition.

The FootprintID® platform helps solve some of the problems created by the lack of information sharing that exists in our current healthcare environment. It is a central repository for all your health and medical information (and that of family members). This includes unlimited document storage where Covid-19 documents, test results, advanced directives, policy information or any relevant information can be stored. Accurate information can be critical in an emergency, when visiting multiple health care providers, while experiencing a health event (near or far from home), and when participating in the care of another individual.

Employees utilizing the platform can benefit from better health outcomes, reduced costs and time associated with health management, and the potential to save a life in an emergency.

Employers can save money, support their duty of care program, increase employees' peace of mind, help employees should they fall ill, and improve employee productivity.
